Elana (Junji) Liao

TEL: 0407927439 **EMAIL:** elanaliao107@gmail.com **LOCATION:** Hobart, TAS 7010

SUMMARY

I recently completed a Bachelor of Information and Communication Technology with hands-on experience in AI and software development, and I am seeking a position to apply and further develop my technical skills. I aim to focus on integrating AI with software development, leveraging my expertise in machine learning and intelligent systems. I am skilled in training and fine-tuning large language models, deploying computer vision models in production environments, and implementing solutions across natural language processing, data mining, and computer vision domains. I have experience working on both collaborative and independent projects, with additional background in web development. I am driven by complex technical challenges and passionate about advancing AI technologies. Through my academic and volunteer experience, I am confident that I can contribute meaningful value to your organisation.

SKILLS

Front-end: React, Next.js, JavaScript, HTML, CSS

Backend: Python, Java, Node.js

Mobile App Development: SwiftUI, Android, Flutter, React Native, Electron

Operating Systems: Linux, macOS, Windows, Android

AI: Data Mining, Web Crawling and Data Scraping, LLM Training and Deployments

Productivity & Reporting: Excel (Advanced), Word, PowerPoint, Data Reporting & Analysis

Database: MySQL, MongoDB, Firebase

EXPERIENCE

Lead Programmer

February 2026 - June 2026

Industry Capstone Project (Confidential Client), Hobart, TAS

- Developed an **augmented reality** application using **Unity** and **C#**.
- Implemented **compute version** solutions, including QR code recognization and OCR.
- Engineered **spatial computing algorithms** for HUD layouts using **Meta XR**, optimizing readability and user interaction design.

Full-Stack Developer (Volunteer)

September 2023 - October 2024

UTAS TPP Project Group (Image Processing Project), Hobart, TAS

- Developed a RESTful backend API using **Node.js** and **Express** implementing **JWT-based authentication** and **role-based access control**, enabling secure user authentication and data operation to improve system maintainability.
- Trained and integrated a **YOLOv5** object detection model using **PyTorch** achieving 95% mAP on wildlife datasets and integrating inference endpoints into the backend API.
- Designed a **MongoDB**-based data model to manage wildlife metadata, supporting scalable storage and efficient retrieval for analysis.

AI Input Method Editor Engineer

November 2022 - June 2023

iFly Tech, Shenzhen, China

- Developed and optimised **Transformer-based** machine learning models for input prediction, improving typing accuracy and overall user experience in AI-powered IME systems.

- Implemented **RAG (Retrieval-Augmented Generation)** pipelines to enhance context-aware text completion and intelligent word suggestions.
- Analyzed large-scale user input data to model behaviour patterns and support personalised prediction strategies.
- Collaborated with product and data teams to iteratively refine models based on user feedback and performance metrics, improving real-time responsiveness.

NLP Developer (Intern)

June 2022 - August 2022

Tencent Weibo, Chongqing, China

- Developed and trained **Transformer-based NLP classification models** on large-scale user comment data to detect policy-violating content, supporting automated moderation workflows.
- Built automated reporting and visualisation pipelines to surface moderation insights and sentiment trends for operational review.
- Adhered to data privacy and platform compliance standards throughout data processing and model development.

Technical Lead, Community Information System (Volunteer)

October 2021 - May 2023

Project Trans (NGO), China

- Led the development of community health information platforms (e.g., *mtf.wiki*, *rle.wiki*) using **Django** and **MySQL**, delivering structured and scalable web-based services.
- Designed backend data models and implemented content management workflows in **MySQL**, ensuring efficient data storage and retrieval.
- Built and maintained secure web services with **Django**, supporting reliable access to healthcare and support resource information.

EDUCATION AND TRAINING

Bachelor of Information and Communication Technology, Artificial Intelligence

University of Tasmania,
Hobart, TAS · Graduated: June 2026

Bachelor of Engineering, Communication Engineering

Chongqing University of Post and Telecommunication,
Chongqing, China · Graduated: June 2023

CERTIFICATES

IBM TechXchange 2025 - watsonx Hackathon
Top 50 Teams (Global)

REFEREES

Dr. Lindsay Wells
Lecturer ICT, Major Coordinator - Application and Web Development, University of Tasmania
Email: lindsay.wells@utas.edu.au
Phone: 0448 884 177

Ellie Bedells
Project Teammate, University of Tasmania
